OBJECTIVE

Computer Science undergraduate at Universiti Sultan Azlan Shah (CGPA 3.83) seeking a 14-week Cybersecurity Internship starting February 2027 in Selangor or Kuala Lumpur. Practical experience in threat detection, reverse engineering, and full-stack development, with the goal of contributing effectively to SOC monitoring, incident response, or penetration testing teams.

EDUCATION

Bachelor of Computer Science - Universiti Sultan Azlan Shah, Perak

2024 - 2027 | Current CGPA: 3.83 (Semester 4)

Diploma in Information Technology - Universiti Sultan Azlan Shah, Perak

2021 - 2024 | CGPA: 3.77 (Dean's List for 4 Semesters)

Sijil Pelajaran Malaysia (SPM) - Science Stream - SMK Taman Desaminium

2018 – 2020

PROJECTS

CloudSentinel: SSH Honeypot & Threat Detection System

2026 | Final Year Project

- Built a Python SSH honeypot deployed on DigitalOcean to capture brute-force attacks and attacker command logs in real time.
- Applied HASSH client fingerprinting and 20 MITRE ATT&CK rules to identify common botnet and reconnaissance scanner traffic.
- Automated firewall IP blocking with a median response time under 1 millisecond during benchmark testing.
- Created a Next.js dashboard backed by ClickHouse and Redis to monitor live attack sessions, GeoIP maps, and alert summaries.

RedLilyGO: ESP32-S3 Security Testing Firmware

2026 | github.com/zis3c/RedLilyGO

- Developed custom C++ firmware for the LILYGO T-Dongle-S3 to practice authorized USB HID payload automation and Wi-Fi packet capture.
- Built a local web interface and a .NET 8 desktop companion app to manage scripts and saved PCAP files over USB serial.
- Configured GitHub Actions workflows with CodeQL, Semgrep, and Gitleaks to check code security on every commit.

JanjiCare: Clinic Web Appointment & Telehealth System

2026 | github.com/zis3c/Clinic-Web-Appointment

- Built a full-stack clinic booking and telehealth platform using Laravel 13, PHP 8.3, React 18, Inertia.js, and Tailwind CSS.
- Implemented role-based access control for patient, doctor, and admin portals with real-time queue updates powered by Laravel Reverb.
- Integrated LiveKit WebRTC video consultations secured with server-signed JWT room tokens and automated appointment notifications.

Mobile App Security & Reverse Engineering Study

2025 | Personal Research

- Decompiled a hybrid Android application using JADX and Apktool to study how Capacitor and Ionic apps communicate with backend APIs.
- Reviewed client-side session storage, Android backup settings, and file upload handling against the OWASP Mobile Top 10 guide.
- Documented practical remediation steps covering encrypted local storage, token rotation, and server-side MIME validation.

Polyglot File Generator

2025 | github.com/zis3c/Polyglot-File

- Created a Python CLI tool that merges valid JPEG or PNG images with PDF documents to study how file-signature checks handle dual-format files.

EXTRACURRICULAR ACTIVITIES

Secretary & Reverse Engineering Trainer - USAS CTF Team (USAS / Dot Zero)

2025 - 2026 | ctftime.org/team/421634

- Managed team administration, competition registrations, training schedules, and internal MockCTF onboarding sessions as team secretary.
- Designed and taught hands-on Reverse Engineering workshops covering C compilation stages, static analysis in Ghidra, and dynamic debugging and binary patching with x64dbg using custom C crackmes.
- Built a Python and Bash CTFd workspace automation tool at github.com/zis3c/CTF-Pipeline to streamline challenge downloads and write-up templates for the team.
- Competed with team Dot Zero in national and international CTFs, placing 21st in RE:UN10N CTF 2025, 88th in ApoorvCTF 2026, and 133rd out of 1,359 teams in 0xFun CTF 2026, alongside Curtin Malaysia CTF, UiTM TAMING iCTFF8, and HACK10.

Committee Member, Logistics & Special Unit - STEM Association, USAS

2025 - 2026 | stem.zis3c.dev

- Assisted with technical operations, digital records, and system handover documentation for the association.
- Built the official STEM-USAS website using React and TypeScript for club announcements and member registration.
- Created STEM-Telebot, a Python Telegram bot linked to Google Sheets to verify 62 registered club members and generate digital receipts.
- Built USAS Assignment Notifier, a Python and PostgreSQL Telegram bot that sends automated LMS deadline reminders to 50 students across 245 tracked assignments.
- Developed USAS Class Timetable at jadualkelas.zis3c.dev to help students export class schedules to PDF and phone wallpapers.

WORK EXPERIENCE

Computer Technician (Internship) - OK Computer Solution SK, Seri Kembangan

September 2023 - January 2024

- Repaired laptops and desktop PCs, performing RAM, SSD, and GPU upgrades as well as screen, battery, and keyboard replacements.
- Diagnosed and resolved Windows OS corruption, Blue Screen errors, and virus or malware infections.
- Assisted customers with technical inquiries, accessory sales, and e-commerce order fulfillment on Shopee.

Service Crew (Part-time) - RHB Restaurants Sdn. Bhd. (Pizza Hut), Seri Kembangan

April 2021 - August 2021

- Handled customer orders, food preparation, and kitchen hygiene standards during daily operations.

CERTIFICATIONS, HONORS & AWARDS

- Google Cybersecurity Professional Certificate - Coursera (2026)
- Reverse Engineering Bootcamp: Ghidra, IDA, Linux, and x86_64 - Udemy (2026)
- Dean's List Award (Degree) - Semesters I, II, III & IV (2024 - 2026), Universiti Sultan Azlan Shah
- Dean's List Award (Diploma) - 4 Semesters (2021 - 2024), Universiti Sultan Azlan Shah

SKILLS & LANGUAGES

Security & RE Tools: Ghidra, x64dbg, IDA, JADX, Apktool, SIEM & SOAR, Log & PCAP Analysis, MITRE ATT&CK, Wireshark, Nmap, Burp Suite, Linux, Docker, Git

Programming & Web: Python, C, C++, TypeScript, JavaScript, PHP, SQL, Bash, Laravel, React, Next.js, PostgreSQL, ClickHouse

AI Agent & Automation: Codex, DeepSeek, Antigravity, Agentic Workflows, CLI Tooling & Harness Development

Languages: Bahasa Melayu (Native), English (Fluent)
